

# Tata Data Visualisation: Empowering Business

Virtual Job Simulation Report | Forage Program

---

## Project Overview

This project was completed as part of the Tata Data Visualisation Job Simulation on Forage. The primary objective was to analyze online retail transaction data, uncover seasonal trends, and present actionable business insights to senior executive leadership.

## Key Responsibilities & Deliverables

- Processed and transformed raw transactional datasets using Power Query.
- Designed interactive multi-page Power BI dashboards focusing on revenue trends, customer segmentation, and regional performance.
- Prepared structured insights and recommendations to support strategic decision-making.

## Dashboard Insights Summary

- 1. Monthly Revenue Trend:** Identified significant seasonal fluctuation, with revenue dropping to 0.52M in February and surging to a peak of 1.51M in November during holiday shopping periods.
- 2. Regional Performance:** Analyzed sales distribution across countries, noting that a handful of international markets (such as Netherlands and EIRE) drive substantial revenue volume outside the UK.
- 3. Customer Value:** Highlighted top-tier customers based on total revenue contribution, enabling targeted retention strategies.

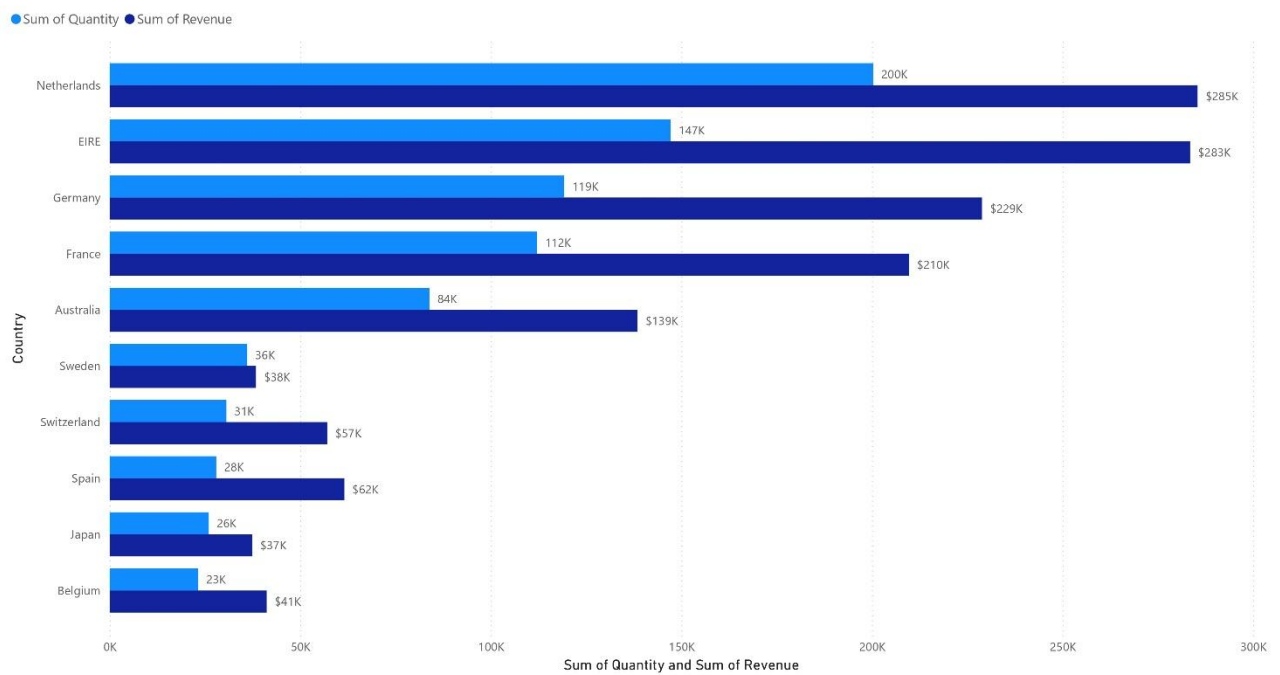

## Tools & Technologies

Power BI Desktop, Power Query, DAX, Data Modeling

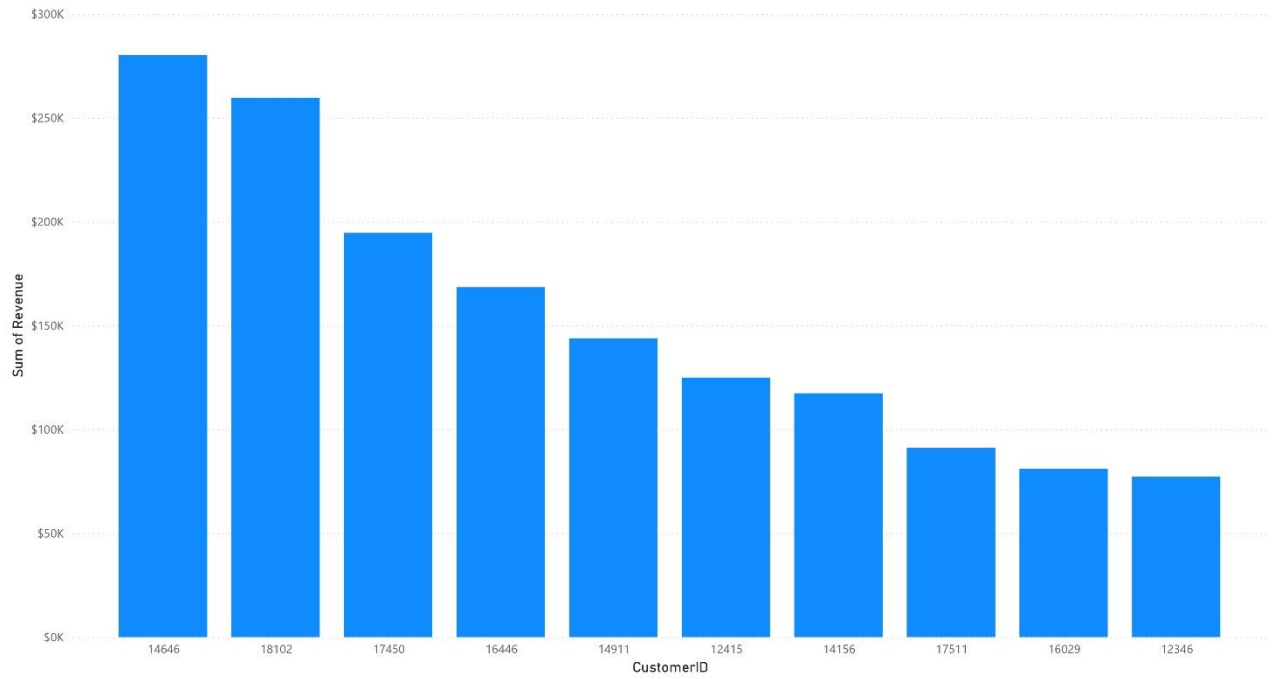

## 2011 Monthly Revenue Trend & Seasonal Analysis

## Top 10 Countries by Revenue and Quantity (Excluding UK)

Top 10 Customers by Revenue

Global Demand by Country (Excluding UK)
